CUOI

THICK LEATHER

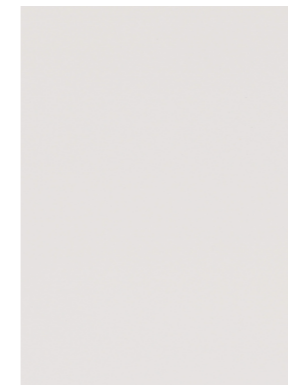

100% pelle / leather

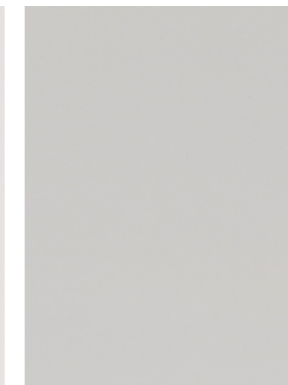

Il cuoio ha caratteristiche di resistenza e soprattutto igieniche molto elevate che lo rendono particolarmente adatto alla produzione di molti manufatti di uso comune. Questo materiale viene ricavato dalle pelli grezze che subiscono le cosiddette operazioni di riviera come la depilazione e la calcinazione. In seguito la pelle viene conciata. La sua particolare struttura, costituita da un intreccio tridimensionale di fibre collagene, una proteina, fa sì che il cuoio abbia anche proprietà termoisolanti. È un materiale dalla lunga storia e dalle lunghe lavorazioni.

Thick leather is extremely resistant and hygienic, qualities that make it particularly suitable for the production of a range of day-to-day products. The material is extracted from raw skins, which undergo treatments such as hair removal and calcination. The hide is then tanned. The unique structure of the material, which is composed of a three-dimensional weave of fibres of collagen – a protein – makes the thick leather a good heat insulator. This is a material with ancient history that requires a long processing phase.

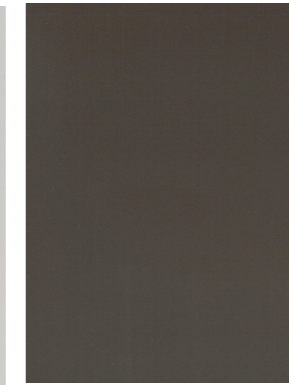

K02 - bianco latte

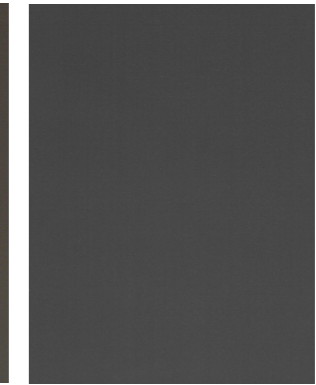

K03 - bianco ghiaccio

K28 - fango

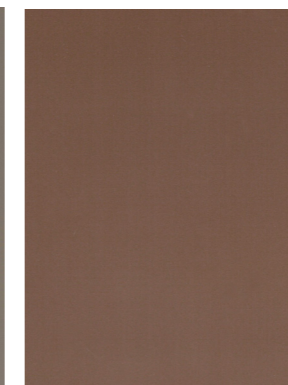

K18 - graphite

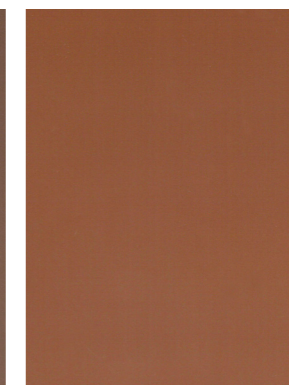

K29 - toupè

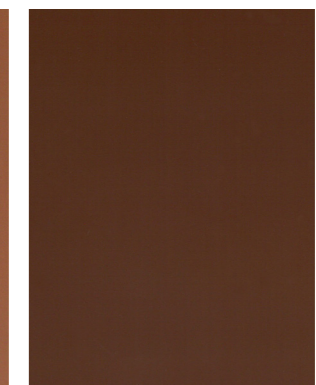

K31 - tabacco

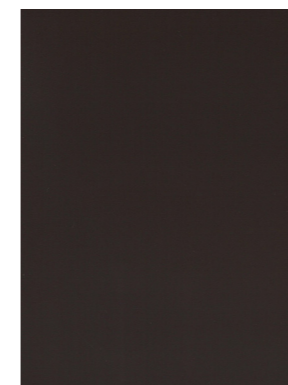

K30 - caramello

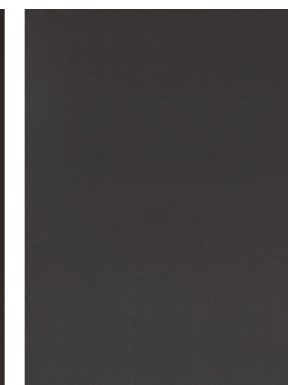

K25 - bruciato

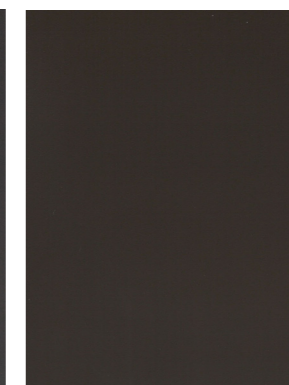

K11 - moka

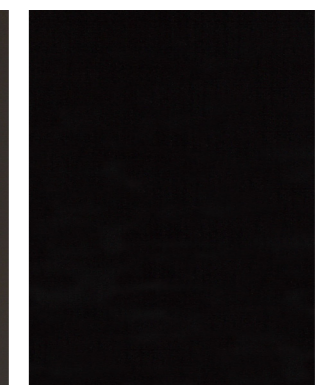

K20 - grigio

K04 - moro scuro

K06 - nero
